Dry roots can be had at any time before the 1st of June, and will be packed, and sent according to directions to any part of the Province.

A Discount of 25 per cent. on the catalogue prices, will be allowed to all purchasers of plants, &c. &c., for all sums above 50 dollars, and all orders from a distance containing cash, or reference in Toronto, will be punctually attended to.

The Subscriber would also intimate, that he has a choice collection of Fruit Trees on hand, consisting of Apple, Plum, Pear, Peach and Cherry, selected by himself from some of the best nurseries in Rochester last fall, and which he will sell cheap for cash; and having made arrangements for a supply of Fruit Trees, Flowering Shrubs, Herbaceous Plants, &c., &c., orders entrusted to him will be faithfully executed.

Toronto, Feb. 2nd, 1846.

JOHN GRAY,

BRIEF DIRECTIONS FOR THE

MANAGEMENT OF PLANTS IN ROOMS.

THE management of Plants in dark or close rooms is a very difficult matter, as they lose their vegetation for want of light and air; and also suffer frequently for want of being watered when dry, but more frequently, by getting too much water, which soddens the mould and rots the roots.

If in a light airy room, the plants will thrive nearly as well as in a Green House, with proper management to keep them near the light as possible, and only to give them water, when the mould in which they are grown is dry; they must then have a good soaking; and if the leaves get covered with dust, it must be washed off, as it stops the pores and makes them turn yellow and sickly.

The oftener the plants are changed the better; and it is a good plan to admit air whenever the state of the weather will permit it, and the best time is between ten and two o'clock in the day.

More plants suffer from too much moisture, than from too little: the persons who generally have the care of such plants, from want of experience, thinking the more water they give the better, and suppose they want water every day, and pretend they cannot tell whether the plant wants water or not, when it is the easiest thing in the world to see whether the mould in the pots is moist or dry; if there is the least degree of moisture, of course the plants require no water, but as soon as it is dry they require a good soaking; if the plants are kept in small pots and full of roots, they will require much more water, and more frequently than those that have more room and fewer roots; in winter, and in a light room, and where the plants can be set near the window, they will frequently succeed as well, or even better, with good care, than in a Green-house, as being not so many in number, they frequently are attended with more care, and we have frequently seen healthier plants of Geraniums, Myrtles, Camellias, and different sorts of China roses grown in rooms than in the Green-house, the reason for which may be attributed to the greater care in attending a few plants, by turning the different sides occasionally to the light, in gathering off decayed leaves as they appear, and only supplying them with water when needed. To have them surfaced with leaf mould and sand, or sandy loam at least once every two months, taking care not to press the earth too hard, as this prevents the free circulation of air so necessary to the growth of plants in rooms, and leaving at least half an inch between the surface and the rim of the pot. Placing moss on the surface of the earth in pots is a bad practice, as a dampness arises from it, which frequently damps off the stem of the plant, and it also prevents the circulation of air to the roots.

The splendid new varieties of Geraniums, China and Tea Roses, Fuchsias, Verbenas and Camellias, &c., may all be grown to the greatest perfection, and by attending to the above observations, the difficulties attending the growing of plants in rooms, may be entirely overcome.

Toronto, Feb. 2nd 1846.

NEW STRAWBERRY.

HOVEY'S SEEDLING.

THIS STRAWBERRY was raised by Messrs. Hovey, of Boston, and has been exhibited for the last eight years, at the Rooms of the Massachusetts Horticultural Society, and each season obtained the Society's Premium, although in competition with the Hovey's Seedling, Downton, &c. Gentlemen, well acquainted with the above varieties, have seen the Bed in full bearing, and they unhesitatingly pronounced it to be the largest, most handsome, best flavoured, most productive, and hardy variety they have ever seen.—*Boston Horticultural Magazine*.

The Subscriber received Plants of the above Strawberry from Messrs. Hovey three years ago, and they have stood the last three winters without the loss of a single Plant. The Price then was 12s. 6d. per dozen. They are now offered at the reduced Price of 5s. per dozen, or, by the hundred, 25s.

Toronto, 1846.

JOHN GRAY.

European Grape Vines, for Vinerles, &c.

THE Subscriber can furnish the following superior kinds of Grape Vines, raised from the eye, at 2s. 6d. per Plant:—Black Hamburg, Black Zinfandel, Black Sylvana, Black Prince, White Sweet Water, White Frontenac, White Muscat of Alexandria, White Assyrian, Golden Chasselas, and Red Frontenac.

The Subscriber has had the opportunity of testing most of these varieties, in the Vinerles at Rosedale (the seat of W. B. Jarvis, Esq.), and he can warrant them true to their name.
